EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the Specification:

The amendment to the specification dated October 31, 2007 has not been entered because it does not conform to 37 CFR 1.121. The changes therein are incorporated in this Examiner's Amendment.

On page 2, line 20, "b – b" has been changed to -- B – B --.

On page 2, line 21, "c – c" has been changed to -- C – C --.

On page 2, line 25, "d – d" has been changed to -- D – D --.

On page 2, line 29, "b – b" has been changed to -- B – B --.

On page 3, line 7, "axis" has been changed to -- axle --.

On page 4, line 29, "d – d" has been changed to -- D – D --.

On page 4, the last two lines have been deleted.

On page 4, after line 31, beginning as a new line, the following has been inserted:

-- In this alternative embodiment, there is no need to make the tower lean away from the wind and as such no need to incline the rotor blades 28. This --.

In the Claims:

In claim 1, line 2, "the" has been changed to -- a --.

In claim 1, line 3, "a" (first occurrence) has been changed to -- the --.

The above changes to the specification have been made because the amendment to the specification dated October 31, 2007 does not conform to 37 CFR 1.121. The above changes to claim 1 have been made to correct obvious errors.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The instant application is directed toward an unobvious improvement over the invention disclosed in French Patent 1,086,320. The French Patent discloses a wind power plant of cyclone type comprising a base 11, a tower 1 arranged above the base and being open at the top and provided with a side inlet 5 for the wind to generate a cyclone in the tower, a substantially horizontal turbine 9 having inlets near 12 through the base and an outlet 8 to the center of the cyclone in the tower. The improvement comprises the tower being formed such that the cross-section of the tower forms an elliptical shape in the horizontal plane substantially along the entire tower length, the center of the ellipse being positioned substantially at the tower axis. None of the prior art of record discloses or suggests the improvement. Applicant's argument in the Remarks dated October 31, 2007 (page 8, paragraph three and the paragraph bridging onto page 4) that the tower in French Patent 1,086,320 is a logarithmic spiral has been carefully considered

and is persuasive. The rejection of claims 5 and 8 under 35 USC 102(b) as being anticipated by French Patent 1,086,320 is thus withdrawn.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
